DETAILED ACTION

1. This Office Action is responsive to the U.S. Patent Application Ser. No. 10/550,105 filed on October 31, 2005 and a Preliminary Amendment filed on September 21, 2005, claims **1-14** are pending in the application.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. This office acknowledges receipt of the following items from the Applicant:
Information Disclosure Statements (IDS) filed on 09/21/05 and 11/28/05.
Information disclosed and listed on PTO 1449(s) were considered.

Examiner's Statement of Reasons for Allowance

4. Claims **1-14** are allowed.

Garni et al. (US 6,621,729), Nahas et al. (US 6,600,690), Lu et al. (US 6,369,733) and Perner et al. (US 6,188,615) disclose a magnetic memory device having a sense amplifier similar to that of the present application, but fail to teach:

"a sense amplifier circuit including a differential switch pair being disposed for each read line pair; a bias resistor pair being disposed between each differential switch pair and a power source; and a constant current circuit being shared among a plurality of the differential switch pairs, and making the sum of a pair of read currents flowing through each differential switch pair constant" as claimed in the independent claim 1;

dependent claims 2-13 are therefore allowed because of their dependency on claim 1;
or

“a sense amplifier circuit comprising a differential switch pair being disposed for each read line pair; a bias resistor pair being disposed between each differential switch pair and a power source; and a constant current circuit being shared among a plurality of the differential switch pairs, wherein information is read from the storage cell on the basis of a difference between a pair of read currents flowing through the read line pair” as claimed in the independent claim 13; or

“a method comprising the steps of arranging a differential switch pair for each read line pair; arranging a bias resistor pair between each differential switch pair and a power source; arranging a constant current circuit so as to be shared among a plurality of differential switch pairs; and reading information from the storage cell on the basis of a difference between a pair of read currents flowing through the read line pair” as claimed in the independent claim 14.

Any comments considered necessary by applicants must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comment on Statement of Reasons for Allowance”.
